Action sets and Actions

Action Sets define a **group** of available actions to interact with records.
Defined at the **entity level**.

- Create
- Edit
- Import
- Copy
- Mass Update
- Confirm Duplicates
- Review and Confirm Duplicates
- Merge or Split Duplicates
- Review Duplicates Suggestions
- Delete
- Export
- Browse Graph
- Explain Record

Action restrictions

- **Duplicate Management** and **Explain Record** actions are **not available** for **basic or ID matched** entities.
- **Delete** is only available for entities with **Delete Enabled**
- **Copy** is only available for entities with an **ID Generation set to UUID or Sequence**.
- **Import** can be restrict to creation or update only.
- Authoring actions require that you select a stepper that valid for the action:
 - **Create**: The root collection step must have one child step enabled on parent create.
 - **Edit and Mass-Update**: The root collection step must have one child step enabled on parent edit.
 - **Import**: The root collection step must enable child import on parent create.
 - **Copy**: The root collection step must enable child copy on parent edit.

Graph View

- Automatically generated
- Visualize and navigate relationships
- Select or filter relationships
- Expand/Collapse nodes
- Graphs also leveraged for confirming, merging or splitting Golden Data
