

xDM Developer Training

## Understanding the Certification Process

# Data Certification Process

Transforms **Source** data into **Golden** data.

# What are the different types of records?

## Source

**All** source data sent

- Raw data
- All updates are stored
- From **authoring or publisher**

## Master

**Latest** source data sent

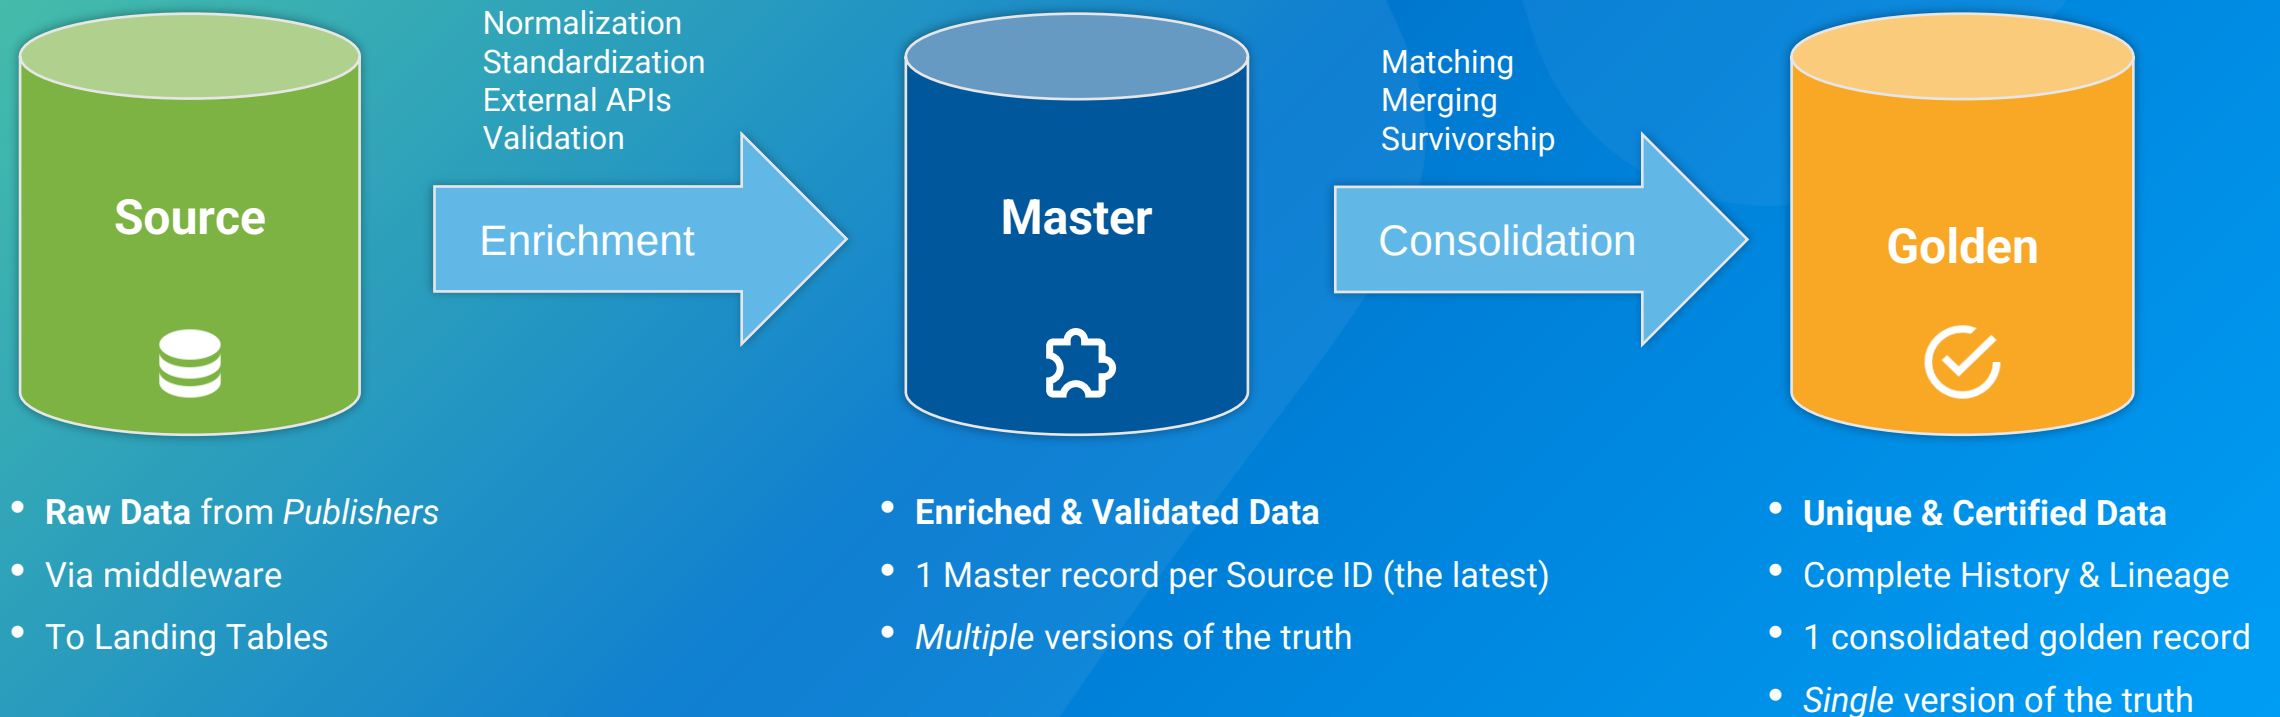

- Enriched and validated source data
- Attached to a **Publisher**
- Links to source records

## Golden

**Consolidated** master data

- **Certified and validated** data
- Consolidated from merged masters
- Supports data override
- Supports in-hub creation
- Consumed by downstream systems
