

Designing visual bricks

Application components

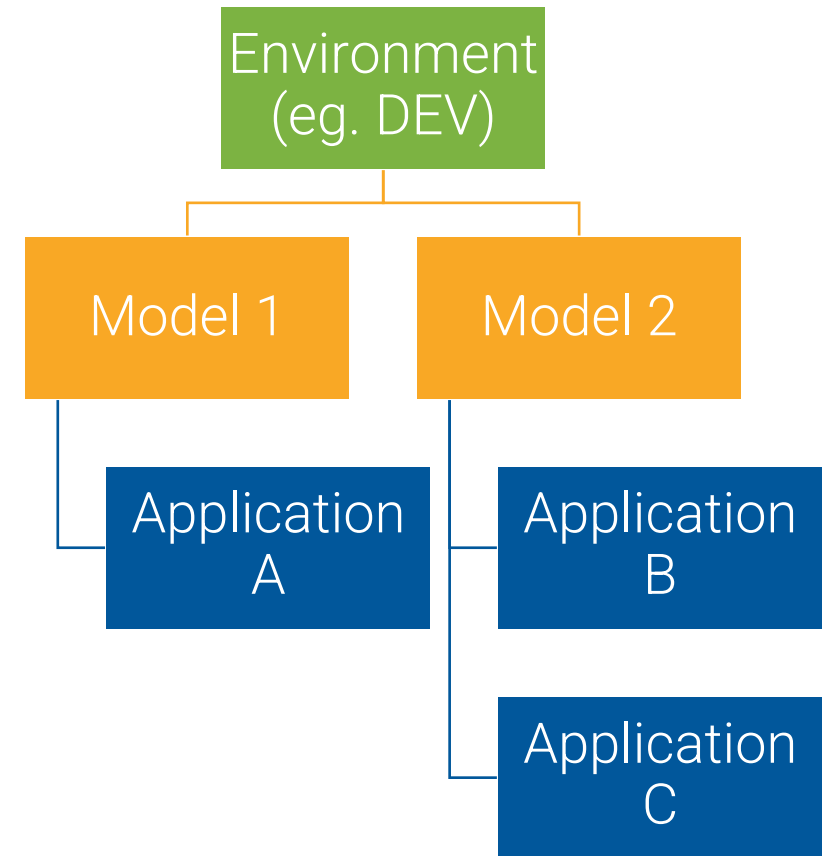

Application features

Provide **customized experience** to access and manage data based on users' roles, privileges and requirements.

These applications may:

- Display **relevant information** in a **business-friendly way**
- Support data management operations, such as **data authoring**
- Support **user collaboration** for data management operations

Application terminology

Navigation drawer header

Brand with application Cover Image,
Avatar and Title

Header

Current editor title/Breadcrumb
Global Search and Profile

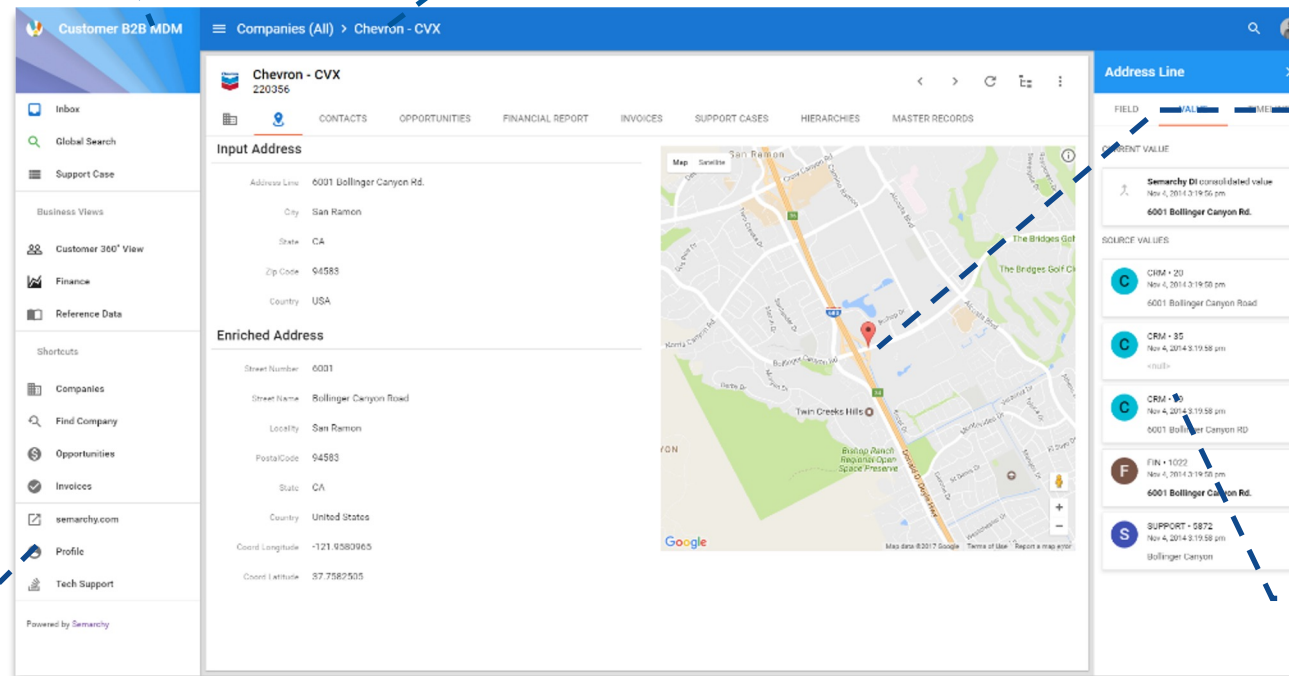

Editor

Used to browse business views
and/or manage data using steppers.

Navigation drawer

Contains *shortcuts* to actions.

Contextual Panel

- Filter data: Create, manage & share filters
- Overview: Navigate complex business views
- Documentation: Field details, value or timeline.

Application components

- A set of structured **business views** to browse data from multiple entities.
- **Forms, collections** and **display cards** used in business views to display this data.
- **Search form** to search or filter the data within the business views or in the **global search**.
- **Action sets** to trigger data authoring.
- **Workflows** and **Steppers** to create or modify new records – “guided authoring”
- **Duplicate Managers** to review, merge, and split groups of matching records
- **Application actions** organized into a hierarchy of **folders**.
- The application **navigation drawer** contains shortcuts to frequently used actions or folders.

Application components
