

Lab 12 - Action Sets

Lab 12 - Action Sets

Task 1: Configure the action sets

1. Add an **action set** for the *customer* entity
Note: Don't take the default actions
2. On the next screen, add an action, **select the stepper** you just created
3. Select the following **actions**:
 - Create
 - Edit
 - Import (In **Action Configuration**, set **Imported Record Type** to *Master Records*)
 - Explain Record

Task 2: Use the action sets

1. Validate and re-deploy the application to apply changes made on steppers.
2. In the application UI, use the stepper you configured in the previous task to create a new customer record – in the **customers** view, click on the **create** icon to add a customer.
3. See the Stepper in action again, Go to your application, select the **Entities** folder in the navigation bar. Select **Master Data** then **Customers**.
4. Use the **Options** button (3 dots) on the top right corner and select **Import**. Upload the **xDM_training-Customers.xlsx** file. Refresh once the process is completed.
Note the number of records imported.
