

Lab 16 - Manipulating Data using REST API

Lab 16 - Manipulating Data using REST API

*Task 1: Create a **Customer** record using your REST client such as Postman. (Instructions are for Postman)*

1. Add **Basic** authorization information with the following information:

- **Username** - semadmin
- **Password** - <password>

2. Set the request method to **POST** and copy the following URL:

- `http://{{hostname}}/semarchy/api/rest/loads/CustomerTrainingApp`

Replace *hostname* with your own hostname as supplied. If you named your Data Location other than *CustomerTrainingApp*, then modify the url accordingly.

3. Set the request **Body** to **JSON** format

(click on the 'raw' radio button and select *Json* in the *Text* dropdown)

Copy/paste the following payload:

```
{

  "action": "CREATE_LOAD_AND_SUBMIT",
  "programName": "Postman",
  "loadDescription": "Create Customer record using REST API",
  "jobName": "LOAD_CUSTOMER",
  "persistOptions": {
    "defaultPublisherId": "CRM",
    "missingIdBehavior": "GENERATE",
    "persistMode": "IF_NO_ERROR_OR_MATCH",
    "optionsPerEntity": {
      "Customer": {
        "enrichers": [],
        "validations": [],
        "queryPotentialMatches": false      }    },
    "persistRecords": {
      "Customer": [ {
        "PublisherID": "CRM",
        "SourceID": "98765",
        "CustomerName": "Big Corp",
        "BillingAddress.StreetName": "8 Seventh Avenue",
```

```

    "BillingAddress.City": "New York City",
    "BillingAddress.PostalCode": "10036",
    "BillingAddress.Country": "US"
  }
]
}

```

5. Execute the request. You should receive a response similar to this:

```

{
  "status": "PERSISTED",
  "load": {
    "loadId": 193,
    "loadStatus": "PENDING",
    "loadCreator": "semadmin",
    ....
  }
}

```

(Your own LoadID value will be different)

6. Find the record in your application.

Task 2: Query data

1. Retrieve all the *Customer Golden Data* records and check the response format
2. Get the details for the '**Semarchy**' golden record.
